

Deliverable 1. Provide a similar screenshot to the one below:

```
root@web01-david:~  
Microsoft Windows [Version 10.0.17763.2237]  
(c) 2018 Microsoft Corporation. All rights reserved.  
  
C:\Users\david.thomsen-adm>ssh david@web01-david  
david@web01-david's password:  
Last login: Tue Nov  2 08:38:34 2021  
[david@web01-david ~]$ sudo -i  
[sudo] password for david:  
[root@web01-david ~]# ls /var/log/httpd  
access_log  error_log  
[root@web01-david ~]#
```

Deliverable 2. Research the Apache Logging Format. For each of YOUR log entries that reflect the first successful (?test) and then an unsuccessful URL (totallyexist.html), fill out a table similar to the one below.

You must figure out which fields (space delimited are in your log). There are 11 fields, the first of which remote host has been completed for you:

Field Name	?test=1 event	doesnotexist.html event.
1. Remote Host	10.0.5.150	10.0.5.150
2. Browser Type	Chrome	Chrome
3. Time Received	[02/Nov/2021:08:45:29 -0400]	[02/Nov/2021:08:45:56 -0400]
4. Time Zone	-0400	-0400
5. Method used for Access	GET	GET
6. Resource	/?test=1 HTTP/1.1	totallysuperreal.html HTTP/1.1
7. Status code	200	404
8. Size of return	36	219
9. Protocol Used	HTTP/1.1	HTTP/1.1
10.UserID	-	-
11.OS	Windows x64	Windows x64
